

## The [ceiling fans](#) have been a breath of fresh air in our everyday lives...

Our cooperation with the Italian [ceiling fans](#) manufacturing firm [ITALEXPORT](#) dates back to 2007, since when we have been the [exclusive distributors](#) of their products in Greece.

### **We have turned the air-conditioning off... Why?**

The advantages of a [ceiling fan](#) are:

1. Their power consumption is equal to that of an ordinary light bulb.
2. They reduce an average room's temperature by 6-8 degrees Centigrade (depending on the space and weather conditions).
3. Their carbon dioxide emission is by 20 times less than that of a modern air-conditioner. [Ceiling fans](#) are absolutely eco-friendly.
4. They are completely noiseless (0db).

5. They reduce the cost of the electricity by 40% when used in combination with an air-conditioner, as the function and usage time of the air-conditioner are reduced, too.
6. They neither freeze nor dry the air. They are suitable for nursery rooms.
7. They can either operate with a remote control or the use of a double switch.
8. They work as natural repellents.
9. They work with LED, save-energy or eco-halogen lamps. Some models feature an integrated LED lighting system.
10. They are exclusively manufactured in Italy, they are presented in unique designs and they can satisfy everyone's needs. Specifically, ITALEXPORT is the only firm that offers certifications for a [three-meter-diameter fan](#).
11. Both [ITALEXPORT](#) and [MAVROS LTD](#) provide guarantees and after-sales service respectively.
12. They can be installed easily and efficiently. In fact, the cost of installation is fairly cheaper than that of an air-conditioner.
13. No maintenance cost.
14. Last but not least, in the winter, they can save a respectable amount of heat (through the reverse function of the flaps) by keeping the warm air low and recycling it.

**It's time for a wind of... light!**
